

Lavu Kiosk

The Lavu Self-Ordering Restaurant Kiosk

Simplify, enhance, and expedite the guest experience with Lavu's self-ordering kiosk. Perfect as an addition to counter staff or as a stand-alone ordering solution, the Lavu kiosk is easy-to-use, intuitive, and designed specifically to help restaurants empower guests and increase table turns while growing revenue. Available for iOS or Android.

- Increased sales
- Higher check averages
- Increased efficiency
- Reduced labor costs
- Satisfied customers

Meet and Exceed Customer Expectations

Today's consumer is well aware of the benefits of technology and increasingly expects to see the latest technology in use at their favorite restaurants. Lavu's self-ordering kiosk is as easy as using an iPad; immediately intuitive for those customers who would jump at the chance to skip the long line at the counter.

Lavu Kiosk Provides Restaurants with Transparency, Security, & Efficiency

Be Transparent

The self-ordering kiosk allows the input of nutritional data and allergen information on relevant screens. Impress your customers with alerts on gluten, soy, and vegan options, while staying transparent by providing calorie, fat, sugar, and carb information.

Stay Secure

The Lavu kiosk is PCI compliant, so you know your customers' information is safe and payments are encrypted. Accept swiped, chipped, and tapped payments safely and securely.

Decrease Labor & Hardware Costs

The kiosk will be there all day, every day for a low monthly fee. The kiosk won't get sick and leave you hanging. The kiosk will be fast and efficient without needing a pep talk. The kiosk will enable your staff to provide that extra bit of service to customers by getting out from behind the counter and connecting, encouraging repeat business. Also, the Lavu Kiosk is available for iOS or Android, meaning you can save money on hardware.

“It’s been a great partnership. We have evolved together. Since the beginning, Lavu has been more than willing to work with us, hear our input, and cater to our needs by developing new features that we wanted.”
